About this guide

This guide contains information about installing, using, and maintaining the Toshiba®
SureMark™ 4610 Model 1NR printer.

Who should read this guide

This guide is intended for use by personnel who are installing and using the SureMark 4610
Model 1NR printers.

Where to find more information

Current versions of Toshiba publications are available on the Toshiba Global Commerce

The publications listed under the General tab are available to the public.

To access a specific Toshiba product publication:

1. Click on the Hardware, Application, OS, Integration, or Other tab.
2. Scroll to the desired product, and click on Publication Library.
   
   Note: Access to the product publications requires valid user credentials. For information on
   obtaining a user ID and password, click Learn More.
3. Enter your user ID and password.
4. Click Submit.

Additional information

The following publications provide additional information about the SureMark 460 Models
1NR printer:

- SureMark 4610 Printers: Programming Guide for Models 1xR and 2xR, TC62-0005

Notice statements

Notices in this guide are defined as follows:

Notes

These notices provide important tips, guidance, or advice.

Important

These notices provide information or advice that might help you avoid inconvenient or
problem situations.

Attention

These notices indicate potential damage to programs, devices, or data. An attention notice
is placed just before the instruction or situation in which damage could occur.

CAUTION

These statements indicate situations that can be potentially hazardous to you. A caution
statement is placed just before the description of a potentially hazardous procedure step
or situation.
DANGER

These statements indicate situations that can be potentially lethal or extremely hazardous to you. A danger statement is placed just before the description of a potentially lethal or extremely hazardous procedure step or situation.
Summary of changes
This section documents the changes for each revision of the SureMark 4610 Printers Hardware Guide Model 1NR.

November 2020
This edition of the SureMark 4610 Printers Hardware Guide includes the addition of the following information:

- Warranty statement for the thermal print head and auto cutter

June 2017
This edition of the SureMark 4610 Printers Hardware Guide includes the addition of the following information:

- Setting up and configuring a WiFi adapter
- WiFi configuration and management
- Setting up, managing, and configuring a network printer
Chapter 1. Introducing the 4610 Model 1NR

The SureMark 4610 Printer Model 1NR is single-station thermal printer designed for ease use and service. With a print speed of 80 lines per second (LPS) and a 4-inch paper roll diameter, this high-speed printer lets you quickly print long receipts, monitor paper status, and gather printer usage statistics.

Features and specifications

The key features of the Model 1NR include:

- Print speeds of 80 lines per second (LPS)
- One-hand paper loading with the touch of a button
- 4 inch thermal paper roll
- System management sensors that alert you to:
  - Close the cover on the printer
  - Replace the receipt paper
  - Status of the printhead
  - Printer usage statistics
- Beeper
- Quiet paper cutter
- USB, RS-232, RS-485, Ethernet, and WiFi interfaces
- 3 MB flash memory for storing messages, logos, code pages, and electronic journal data
- DBCS thermal font - 24x24 matrix
- Bar code generation
- Downloadable fonts and code pages
- Downloadable microcode
- Small footprint
- Wall mount

Communication and power

An interface card is shipped with the SureMark 4610™ printers to provide communication to the system unit. Depending on your connectivity requirements, you will have one of the cards listed in Table 2.

</table>
### Network interface adapter prerequisites

The network interface adapters (Ethernet and WiFi) have dependencies on the level of the printer and printer firmware.

- The printer manufacturing date must be after June 10, 2013. Printers built prior to this date have an older level main logic card (MLC) that will not support these adapters. The manufacturing date is located under the paper cover above the serial number label (see "Calling for service" on page 24).
- Firmware level 14 and above is required for an Ethernet interface adapter.
- Firmware level 18 and above is required for a WiFi interface adapter. EC firmware level 17.xx will enable basic function, but will not match the function that is described in this manual. These firmware levels will print a message as part of a test receipt that indicates the firmware should be upgraded.

**Note:** The required firmware levels referenced above will not allow back leveling to a version that does not fully support the installed adapter.

**Important:** If a network interface adapter is installed in a printer and the printer has back level firmware or a MLC that does not support it, the printer will indicate an error:

- The ready light will blink amber with the internal LED#2, which indicates that the printer firmware is back level. If the firmware is known to be at the minimum level identified, then this condition indicates a failed adapter or other HW problem.
- A message is printed in the receipt station that the MLC card does not support network adapters, which indicates that the MLC is back level and cannot be used with the installed adapter.

### Operating system requirements

You can download drivers from the Toshiba Global Commerce Solutions support website: [www.toshibacommerce.com/support](http://www.toshibacommerce.com/support).

The printer provides a compatibility mode to enable use of older drivers and applications with only minor modifications. The default operating system is referred to as "Native Mode." "Native Mode" provides functional enhancements and is supported by the most current applications and drivers.

*Operating system requirements* includes a list of the printer interface options that are supported for each OS/Driver combination.

**Table 3. OS printer interface options**

**Note:**

1. Toshiba 4610 Ethernet Printer iOS SDK is supported with iOS 8.x or later for use with the Ethernet and WiFi interface adapters.
2. Toshiba 4610 Ethernet Printer Android SDK is supported with Android 4.0 or later for use with the Ethernet and WiFi interface adapters.
3. Only those items listed are supported.

**Hardware requirements**

SureMark printers work with the following systems:
- 4694 systems
- 4695 systems (RS-232 connection only and with power supply)
- PC or other store controller with an RS-232, Ethernet, WiFi, or USB port
- SurePOS™ 100 Series systems
- SurePOS 300 Series systems
- SurePOS 500 Series systems
- SurePOS 700 Series systems
- Self Checkout solution
- AnyPlace™ Kiosk
- TCx™ Wave
- TCx700
- TCx300
- TCxFlight
- iOS, Android, and Windows mobile devices

Understanding the controls and indicators

**Locating the power button**

The power button (A in Figure 8) for the 4610 Model 1NR is located under the paper door.
Calling for service

When you call Toshiba for warranty information or service, be sure to have the serial number and model number of the printer available. The serial number and model number are located beside the flipper door (see A in Figure 9).
Figure 9. Location of serial number
Chapter 2. Product specifications

This section describes the physical specifications for models 1NR.

Physical dimensions

**Operating**
5° to 40° C (42.8° to 104° F) with 8% to 80% relative humidity
Chapter 3. Installing and configuring the 4610 printer

This section provides safety information and steps on installing your printer.

Before you begin

Before you install your SureMark printer, be sure to read this section and the Safety Information guide.

Understanding your configuration

Your printer can be set up in either an integrated or distributed configuration. An integrated configuration is one in which all parts of a system are assembled in one location. A distributed configuration is one in which you set up parts of the system in different physical locations. In an integrated configuration, you install the printer on the input/output tray option with the fillers to contain the printer and display on top of the wide-footprint system units. Other tray options include mounting the printer on the full-size cash drawer or directly on the counter.

Verify your order

Each order contains the following:

- 4610 unit
- Interface card (RS-232, RS-485, USB, WiFi, or Ethernet)
- Safety manual
- Warranty statement
- Customer options, such as fillers, cables, and power bricks (packaged separately)

Installing the interface card

The interface card (either an RS-232, RS-485, USB, Ethernet, or WiFi interface) is shipped in a separate box with your printer. Install the interface card as follows:
Figure 11. Installing the interface card

1. As shown in Figure 11, place the printer unit upside down.
2. Insert the tab of the interface card (A) into the slot on the base of the printer (B).
3. Press down on the side of the interface card opposite the tab until the blue release button slider snaps into place.
4. Connect the printer with your system unit or network (RS-232, RS-485, USB, or Ethernet connector).

Note:
1. You might prefer to plug all cables into the interface card before installation; however, **do not** plug in any power until after installation.
2. If you are using an RS-485 interface card, see “Routing the cash drawer and RS-485 cables” on page 30.
3. If you have a power cord, connect it to the printer.

Routing the cash drawer and RS-485 cables

To route the cash drawer and RS-485 cables together through the back cable slot:

1. Route the cash drawer cable through the cable slot (A in Figure 12).
Figure 12. Cash drawer cable routing

2. Route the RS-485 cable (see Figure 13).
   1. Place the RS485 cable completely down on the base B.
   2. Route the cable under the notch C.
   3. Route the RS485 cable through the back cable slot B and C (this is the only possible route).

Figure 13. RS-485 cable routing
Installing the fillers

The fillers are an important part of your integrated system. They securely position your printer into position with the system unit and other peripherals.

Refer to the installation documentation for your system unit for complete instructions.

Wall (or 45-degree) mounting

Attention: Printer must be powered off. The following ESD handling procedure is recommended: You should touch the metal on the printer frame with the back of your hand before making contact with the printer. Also, see "Electrostatic discharge (ESD)" on page 55.

Follow these steps to wall (or 45-degree) mount the printer unit:

1. Turn off the power to the 4610.
2. Roll the bottom position selector (part of the low-paper sensor; \textbf{A} in Figure 15) to the WALL position.
3. Align the two rounded slots on the base of the printer unit (A in Figure 16) with the two D-shaped posts on the mount. Also, ensure that the hook near the corner of the mount aligns with the slot at the corner of the printer unit (B).
Figure 16. Wall-mount slots

4. Slide the printer unit down (or up) until the mount-release button snaps into place.

To remove the printer unit from the wall mount:

1. Press the door-release button (D in Figure 7) and pull (or push) the door fully open.
2. While pushing the mount-release button (B in Figure 17) lift (or lower) the printer unit off of the mount posts and hook.
Configuring a WiFi adapter

This section provides guidance for setup of the 4610 WiFi Interface Adapter. After completion of WiFi setup, Printer IP setup may be required. See “Configuring a network printer (WiFi and Ethernet)” on page 41 for additional setup instructions. The Printer IP setup is common to both the WiFi and Ethernet adapters.

Note:

1. Prior to installation of a WiFi adapter, the printer firmware must be level 18 or later. All new product will be at this level or later. If upgrading an existing printer, see your existing printer documentation for firmware update instructions.

2. If DHCP is used for IP address assignment, the DHCP server must support DHCP Option 61 (Client Identifier). If your DHCP server does not support Option 61, assign a static address to the WiFi adapter. The 4610 printer with WiFi adapter requires 2 IP addresses. Option 61 allows the DHCP server to uniquely identify the two requests. The printer IP assignments will be allocated to the printer MAC address and the WiFi parameters to the Client Identifier.
3. After completion of WiFi setup, it is highly recommended that default passwords be changed and/or unused interfaces disabled.

The 4610 WiFi interface adapter provides a WLAN client connection for normal printer operation and management, plus a separate local connection for setup through a built-in access point (referred to as the Printer Access Point or Printer AP). The following is a summary of the operations necessary to setup the WiFi adapter. Details of each step are provided in the following sections.

1. Connect to the Printer Access Point.
2. Log into the WiFi Configuration and Management interface
3. Setup the WiFi Client
4. Setup the WiFi IP Parameters and other options

Following completion of these steps see, "Configuring a network printer (WiFi and Ethernet)" on page 41 for the Printer IP setup if not using DHCP for all IP parameter assignment.

Before you begin

The information needed for many of the setup steps is provided by the Test/Status Receipt. This receipt should be printed prior to beginning setup.

Printing the Test/Status Receipt

Follow the steps below to print a test/status receipt.

1. Open the paper door, then press and hold the paper feed button.
2. When the printer beeps and the printer-ready indicator begins blinking, release the button and close the paper door.
3. Press and release the paper feed button to print the receipt.

Table 9 shows part of a sample test receipt and highlights the items required for setup.
Table 9. Example of a test/status receipt

<table>
<thead>
<tr>
<th>AP SSID--</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>The network name for the Printer Access Point (AP). Connect to this network to access WiFi setup functions.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Client ID--</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>The client identifier used by the WiFi adapter for DHCP Option 61. This will also be needed to derive the Printer AP network password.</td>
<td></td>
</tr>
</tbody>
</table>

![Figure 18. Example of a test receipt](image)

---

**Connecting to the Printer Access Point (AP)**

Perform the following steps using a personal computer (or similar device) with a WiFi interface and an Internet browser.

**Note:** The details of connecting to a wireless network will vary from system to system. The following examples and instructions are for Windows 7 without additional wireless tools.

1. Click on the Wireless Network Icon which is typically located at the right of the taskbar.

![Figure 19. Wireless network icon](image)

2. Select the Printer Network from the list of available networks and click **Connect**.
Once the device indicates it has established a network connection, it is ready to log into the WiFi Configuration and Management interface.

**Note:** Some systems report a warning when connecting to the printer AP because there is no internet connection provided. This warning should be ignored.

### Logging into the WiFi configuration and management interface

The printer provides web pages for setup and other management. After connecting to the printer AP network, log into the web pages for setup.

1. Open the browser and enter the AP IP address shown on the test receipt.
2. When prompted, enter the username `admin` and the password `Admin`.

The Quick Setup page should open as shown below.

**Note:** If the WiFi adapter had been previously configured the status page will open rather than the Quick Setup.
Setting up the WiFi client

The WiFi client setup is performed from the quick setup page shown in the previous step.

1. Select the target network from the list of available networks.
2. Enter the required information and click Submit.

The data entry screens will vary based on the target network and its security settings. The example screen below shows the data entry screen for a network using 802.1x security.
Setting WiFi IP parameters

By default IP parameters are obtained by DHCP. If this is the intended operating mode then no further setup is required. However, if all settings are not obtained by DHCP, then IP parameters may be set via the Quick Setup page or Wireless Network Interface Configuration page.

- To use the Quick Setup page, select or enter the required parameters and click Submit.
- To access the Wireless Network Interface Configuration page, select the Network tab and then the Wireless Network - Interface - Configuration menu item.

Note: Host name configuration is only available on the Wireless Network Interface Configuration page. If the default hostname is used, then the quick setup page probably provides all the required settings.

Changing default passwords for WiFi

Default passwords must be changed to ensure that the network remains secure.

To change the Web Interface password, select the Administration tab and then the User Management menu item.

To change the Access Point password and other settings, select the Network tab and then the Access Point menu item.
Configuring a network printer (WiFi and Ethernet)

This section provides guidance for setup of a 4610 Network printer (WiFi or Ethernet interface adapter installed). When using a WiFi adapter, it is assumed that WiFi configuration has been completed. See [“Configuring a WiFi adapter” on page 35](#) for information on configuring the WiFi Adapter.

**Note:**

1. Prior to installation of an Ethernet adapter, the printer firmware must be at level 17 or later. All new product will be at this level or later; if upgrading an existing printer, see the existing printer documentation for firmware update instructions.

2. DHCP is the recommended method for IP configuration. If using DHCP, all settings can be controlled by the DHCP server so no further configuration steps are typically required. The default hostname includes the last 6 characters of the printer MAC address so that each is unique and associated with the printer through the MAC address (which is printed on a label attached to the adapter).

3. After completion of network printer setup, it is highly recommended that default passwords be changed.

The following is a summary of the operations necessary to setup a network printer. Details of each step are provided in the following sections.

1. Log into the Printer Configuration and Management interface
2. Setup the Printer IP Parameters and other options

Following completion of these steps, the printer should be fully accessible via the network.

**Before you begin**

If setting up a printer with a WiFi Adapter, complete the WiFi setup as described in [“Configuring a WiFi adapter” on page 35](#) and restart the printer before beginning.

The information needed for the setup steps is provided by the Test/Status Receipt. This receipt should be printed prior to beginning setup. See [“Printing the Test/Status Receipt” on page 36](#).

**Note:** To ensure that all required information is present on the receipt, wait for a minute or 2 following power on of the printer. Actual time will vary based on network setup and DHCP server performance.

**Logging into the printer configuration and management interface**

The printer provides web pages for setup and other management. From a computer attached to the same network as the printer, log into the web pages to use them for setup:

1. Open a browser and enter the IP address shown on the Printer Network Configuration section of the status/test receipt.
2. When prompted, enter the username admin and the password Admin.

**Note:** The username and password referenced here are unique from those referenced in [“Configuring a WiFi adapter” on page 35](#). Changing the WiFi passwords does not affect these.

The Overview page should be as shown in Figure 22.
Setting printer IP parameters

By default IP parameters are obtained by DHCP. If this is the intended operating mode then no further setup is required; however, if all settings are not obtained by DHCP then IP parameters may be set via the Network page.

1. Select the Network menu item to display the Network page.
2. Select the required IP Mode and enter the applicable IP parameters.
3. Click **Save**.
4. Navigate to other pages and complete other setup as required.
5. Reset the printer using the **Reset Printer** menu item to activate the settings.

   **Note:** If the printer is powered off/on before resetting it via the menus, all settings will be lost.

### Change default passwords for printer

Default passwords must be changed to ensure the network remains secure.

To change the Printer Web Interface password, select the **Admin Access** menu item.
Chapter 4. Using and maintaining the 4610 printer

This section contains information about the proper use and maintenance of the 4610 Model 1NR. For detailed technical information, see Chapter 2, Product specifications on page 27.

Attention: All covers must be installed on the SureMark printer during operation.

Replenishing consumable supplies

You are responsible for replenishing consumable supplies, which include the paper rolls. Make sure that you are using the recommended supplies for the 4610 printer, which are described in the following sections.

Important: Thermal Print Head Life and Auto Cutter Life are guaranteed only with the use of papers on the TGCS qualified paper list. Use of non-qualified paper sources may result in a shorter lifespan and may result in a billable service call if printer failures are determined by TGCS to be the result of using these papers, regardless of the existence of a service contract or product warranty.

Loading and replacing the paper roll

Ensure that you have the correct paper for the 4610. See “Supported thermal paper” on page 45.

1. Press and release the blue release button to release the paper door. In a wall-mount configuration, you must also pull the door fully open, because of the brake feature that decelerates it from the full force of gravity.
2. If necessary, remove any unused paper or the empty paper roll core before inserting a new paper roll.
   
   Note: Refer to the label inside the printer for a diagram of how to load paper.
3. Place the paper roll into the paper roll bucket as shown on the diagram. The leading edge of the paper should come from the bottom of the roll as shown in the diagram.
   
   Note: The thermal printhead will not print on paper with glue on it. If the new paper roll was sealed by glue, tear off the 6 to 8 inches of paper with glue on it before loading it.
4. Close the paper cover.
5. Press the customer receipt feed button to advance the paper, to verify that the paper is feeding correctly. Feed 30 cm (about 1 ft) of paper through to test for correct alignment.

Attention: Do not pull the receipt paper out of the printer with the paper access cover closed. This disengages the paper feed. The paper feed motor must then catch up before the printer can feed the paper, which causes missing lines or partial lines of print. Use the customer receipt feed button to advance the receipt and all lines will print.

Supported thermal paper

Attention: Using an inferior grade of paper can affect print quality as well as the life of printheads and the printer mechanism.

Note: When selecting a paper, ensure that the paper’s archive life meets the requirements of the tax authorities of your country for archiving tax-related data.
The paper used in the thermal receipt station must meet the following requirements:

**Width**

79.5 ± 0.5 mm (3.13 ± 0.02 in.) or 57.5 ± 0.5 mm (2.26 ± 0.02 in.)

**Outside Diameter**

102 mm (4.0 in.) maximum

**Thickness**

60 μm (0.00225 in.) optimal. Range: 41 μm minimum to 99 μm maximum.

**Important:** Paper has a significant manufacturing tolerance, and nominal paper designations do not reflect actual measurements. The manufacturing tolerance must fall within the published operating thickness range. Customers should test paper in their specific configuration before use. The intent of this specification is that if any spot measurement of the paper is outside the specified range, the paper is deemed not to meet the specification and the customer is responsible for any problems caused by paper jams.

The paper must be wound with the printing side facing out. The paper should not be attached to the core in any manner.

**Important:**

Printer reliability and performance are directly related to the quality of the supplies used by the customer. The published parameters for printer performance are established using supplies that meet the specifications listed above.

Thermal paper with watermarks, coupons, or advertisements printed on the front or back of the paper is **not covered by Toshiba specifications**. Some inks and printing processes work acceptably, but others do not. Printer problems that are caused by supplies that do not meet Toshiba specifications might result in a billable service call, regardless of the existence of a service contract.

**Installing large paper rolls**

The 4610 can accommodate extra-large rolls (up to 15 in.) of paper below the printer. Mounting hardware is necessary to avoid placing undue strain on the paper feed motor. See your Toshiba representative for additional information.

**Cleaning recommendations**

You should inspect your 4610 unit periodically and clean the cover as required. Use a soft, clean cloth with warm, soapy water to clean the plastic parts. Do not use abrasives or any alkaline, ammonia, or chloride-based cleaner.

**Note:** Do not apply cleaning solution directly to the cover. Always apply the cleaner to a clean cloth and then wipe the cover with the damp cloth. Be certain that the cloth is only damp and not dripping wet.

**Cleaning the thermal printhead**

The thermal printhead should be cleaned at regular intervals or when the print quality has noticeably deteriorated. There are many factors that affect cleaning frequency. Poor paper quality, high printer usage, or a dirty environment are all reasons to clean the thermal printhead more often. Complete the following steps to clean the thermal printhead:

1. Open the paper cover.
Retrieving printer statistics

The Model 4610 2CR and 2NR printers retain usage statistics to help you evaluate your printer usage and performance. The statistics available for your printer are defined during printer configuration. Figure 24 is an example of a printed receipt with usage statistics for the Model 1NR.

2. Using a cotton swab soaked in isopropyl alcohol, gently wipe the printhead several times on its print line and on the surrounding area.
3. Wipe off any residual alcohol with a dry swab.

If print quality does not improve after cleaning the thermal printhead, call for service to replace the thermal printhead unit.

Note: The type of paper used and the usage rate will increase wear on the thermal printhead.

In addition to the Usage Statistics, the printer stores statistics on errors or unexpected events for use in predicating problems. See the SureMark Printers: Programming Guide for Models 1xR and 2xR, GA27-5005 for commands to retrieve this data.
The available statistics for the 4610 1NR printer include:

- Number of Failed Flash Writes
- Unexpected Cover Open Count
- Thermal Print Head element failure
- Printer serial number
- Manufacturing Week Code
- Number of paper cuts
- Number of characters printed on the CR (thermal) station
- Number of steps performed by the CR paper feed motor (200 steps per inch of paper)
- Number of times the customer receipt cover was opened
- Number of failed paper cuts
- Number of Flash Erase commands performed (NVRAM write count)
- Cash drawer opened successfully count
- Cash drawer failed to opened count
- Number of bar codes printed
- Number of times the max temperature of either the motors or the print heads have been reached

Telecommunication regulatory statement

This product is not intended to be connected directly or indirectly by any means whatsoever to interfaces of public telecommunications networks, nor is it intended to be used in a public services network.

Electronic emission notices

When you attach a monitor to the equipment, you must use the designated monitor cable and any interference suppression devices that are supplied with the monitor.

Federal Communications Commission (FCC) statement

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense. There is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

1. Reorient or relocate the receiving antenna.
2. Increase the separation between the equipment and receiver.
3. Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
4. Consult the dealer or experienced radio TV technician for help.

Properly shielded and grounded cables and connectors must be used in order to meet FCC emission limits. Toshiba Global Commerce Solutions is not responsible for any radio or television interference caused by using other than recommended cables and connectors or by unauthorized changes or modifications to this equipment. Unauthorized changes or modifications could void the user's authority to operate the equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

FCC Radiation Exposure Statement

To comply with the FCC RF exposure compliance requirements, the separation distance between the antenna and the body of all persons must be at least 20 cm (8 inches).

Industry Canada Class A Emission Compliance statement

This Class A digital apparatus complies with Canadian ICES-003 and RSS247.

Operation is subject to the following two conditions:

1. This device may not cause interference.
2. This device must accept any interference, including interference that may cause undesired operation of the device.
Avis de conformité à la réglementation d'Industrie Canada

Cet appareil numérique de la classe A est conforme aux normes NMB-003 et RSS247 du Canada.

Le fonctionnement est soumis aux conditions suivantes :

1. Ce périphérique ne doit pas causer d’interférences;
2. Ce périphérique doit accepter toutes les interférences reçues, y compris celles qui risquent d’entraîner un fonctionnement indésirable.

Industry Canada Radiation Exposure Statement

This equipment complies with IC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 cm (8 inches) from the body of all persons.

European Union Electromagnetic Compatibility (EMC) Directive Conformance Statement

This product is in conformity with the protection requirements of EU Council Directive 2004/108/EC on the approximation of the laws of the Member States relating to electromagnetic compatibility. Toshiba Global Commerce Solutions cannot accept responsibility for any failure to satisfy the protection requirements resulting from a non-recommended modification of the product, including the fitting of non-Toshiba Global Commerce Solutions option cards.

This product has been tested and found to comply with the limits for Class A Information Technology Equipment according to CISPR 32/European Standard EN 55032. The limits for Class A equipment were derived for commercial and industrial environments to provide reasonable protection against interference with licensed communication equipment.

Attention: This is a Class A product. In a domestic environment this product may cause radio interference, in which case the user may be required to take adequate measures.

**Cable ferrite requirement**

All cable ferrites are required to suppress radiated EMI emissions and must not be removed.

**Electrostatic discharge (ESD)**

**Attention:** Electrostatic discharge (ESD) damage can occur when there is a difference in charge between the part, the product, and the service person. No damage will occur if the service person and the part being installed are at the same charge level.

**ESD damage prevention**

Anytime a service action involves physical contact with logic cards, modules, back-panel pins, or other ESD sensitive (ESDS) parts, the service person must be connected to an ESD common ground point on the product through the ESD wrist strap and cord.

The ESD ground clip can be attached to any frame ground, ground braid, green wire ground, or the round ground prong on the AC power plug. Coax or connector outside shells can also be used.

**Handling removed cards**

Logic cards removed from a product should be placed in ESD protective containers. No other object should be allowed inside the ESD container with the logic card. Attach tags or reports that must accompany the card to the outside of the container.

**Product recycling and disposal**

This unit must be recycled or discarded according to applicable local and national regulations. Toshiba Global Commerce Solutions encourages owners of information technology (IT) equipment to responsibly recycle their equipment when it is no longer needed. Toshiba Global Commerce Solutions offers a variety of product return programs and services in several countries to assist equipment owners in recycling their IT products. Information on Toshiba Global Commerce Solutions product recycling offerings can be found on the [Toshiba Global Commerce Solutions product recycling programs website](#).

Español: Esta unidad debe reciclarse o desecharse de acuerdo con lo establecido en la normativa nacional o local aplicable. Toshiba Global Commerce Solutions recomienda a los propietarios de equipos de tecnología de la información (TI) que reciclen responsablemente sus equipos cuando estos ya no les sean útiles. Toshiba Global Commerce Solutions dispone de una serie de programas y servicios de devolución de productos en varios países, a fin de ayudar a los propietarios de equipos a reciclar sus productos de TI. Se puede encontrar información sobre las ofertas de reciclado de productos de Toshiba Global Commerce Solutions en el sitio web [Toshiba Global Commerce Solutions product recycling programs](#).
Note: This mark applies only to countries within the European Union (EU) and Norway.

Appliances are labeled in accordance with European Directive 2012/19/EU concerning waste electrical and electronic equipment (WEEE). The Directive determines the framework for the return and recycling of used appliances as applicable throughout the European Union. This label is applied to various products to indicate that the product is not to be thrown away, but rather reclaimed upon end of life per this Directive.

Remarque : Cette marque s’applique uniquement aux pays de l’Union Européenne et à la Norvège. L’étiquette du système respecte la Directive européenne 2012/19/EU en matière de Déchets des Equipements Electriques et Electroniques (DEEE), qui détermine les dispositions de retour et de recyclage applicables aux systèmes utilisés à travers l’Union européenne. Conformément à la directive, ladite étiquette précise que le produit sur lequel elle est apposée ne doit pas être jeté mais être récupéré en fin de vie.

In accordance with the European WEEE Directive, electrical and electronic equipment (EEE) is to be collected separately and to be reused, recycled, or recovered at end of life. Users of EEE with the WEEE marking per Annex IV of the WEEE Directive, as shown above, must not dispose of end of life EEE as unsorted municipal waste, but use the collection framework available to customers for the return, recycling, and recovery of WEEE. Customer participation is important to minimize any potential effects of EEE on the environment and human health due to the potential presence of hazardous substances in EEE. For proper collection and treatment, contact your local Toshiba Global Commerce Solutions representative.

Disposal of IT products should be in accordance with local ordinances and regulations.

Battery safety

警告：本电池包含锂。为避免爆炸，请勿焚烧电池或对其充电。请勿：把电池投入或浸入水中，把电池加热到 100°C (212°F) 以上，修理或拆卸。 (C003)

注意
用错误型号电池更换会有爆炸危险
务必按照说明处置用完的电池

Caution: Risk of explosion if battery is replaced by an incorrect type. Dispose of used batteries according to the instructions.
Battery return program

This product may contain sealed lead acid, nickel cadmium, nickel metal hydride, lithium, or lithium ion battery. Consult your user manual or service manual for specific battery information. The battery must be recycled or disposed of properly. Recycling facilities may not be available in your area. For information on disposal of batteries outside the United States, go to the Battery disposal website or contact your local waste disposal facility.

电池回收计划

本产品可能含密封铅酸、镍镉、镍锰氢或锂离子电池。有关特定的电池信息，请参阅用户手册或维修手册。必须正确地回收或处理这类电池。在您所在的地区中可能没有回收设施。有关在美国之外处理电池的信息，请访问 http://www.ibm.com/ibm/environment/products/batteryrecycle.shtml，或与当地的废品处理机构联系。

For Taiwan:

Please recycle batteries.

For the European Union:

Notice: This mark applies only to countries within the European Union (EU)

Batteries or packaging for batteries are labeled in accordance with European Directive 2013/56/EU concerning batteries and accumulators and waste batteries and accumulators. The Directive determines the framework for the return and recycling of used batteries and accumulators as applicable throughout the European Union. This label is applied to various
batteries to indicate that the battery is not to be thrown away, but rather reclaimed upon end of life per this Directive.

Les batteries ou emballages pour batteries sont étiquetés conformément aux directives européennes 2013/56/EU, norme relative aux batteries et accumulateurs en usage et aux batteries et accumulateurs usés. Les directives déterminent la marche à suivre en vigueur dans l’Union Européenne pour le retour et le recyclage des batteries et accumulateurs usés. Cette étiquette est appliquée sur diverses batteries pour indiquer que la batterie ne doit pas être mise au rebut mais plutôt récupérée en fin de cycle de vie selon cette norme.

In accordance with the European Directive 2013/56/EU, batteries and accumulators are labeled to indicate that they are to be collected separately and recycled at end of life. The label on the battery may also include a chemical symbol for the metal concerned in the battery (Pb for lead, Hg for mercury and Cd for cadmium). Users of batteries and accumulators must not dispose of batteries and accumulators as unsorted municipal waste, but use the collection framework available to customers for the return, recycling and treatment of batteries and accumulators. Customer participation is important to minimize any potential effects of batteries and accumulators on the environment and human health due to the potential presence of hazardous substances. For proper collection and treatment, contact your local Toshiba Global Commerce Solutions representative.

This notice is provided in accordance with Royal Decree 106/2008 of Spain: The retail price of batteries, accumulators and power cells includes the cost of the environmental management of their waste.

For California:

Perchlorate material – special handling may apply

Refer to www.dtsc.ca.gov/hazardouswaste/perchlorate.

The foregoing notice is provided in accordance with California Code of Regulations Title 22, Division 4.5, Chapter 33: Best Management Practices for Perchlorate Materials. This product/part includes a lithium manganese dioxide battery which contains a perchlorate substance.

Flat panel displays

The fluorescent lamp in the liquid crystal display contains mercury. Dispose of it as required by local ordinances and regulations.

Monitors and workstations

Oregon: For information regarding recycling covered electronic devices in the state of Oregon, go to the Oregon Department of Environmental Quality site at http://www.deq.state.or.us/lq/electronics.htm.
